

Instalar Phoenix OS en nexus 9

2016-01-19

#Requisitos: Tener instalados los drivers del dispositivo

#Pasos:

```
adb reboot bootloader
```

A la hora de instalar Phoenix OS 1.0 en la nexus 9 LTE he tenido este problema al ejecutar el script de instalación
./flash-all.sh

```
sending 'system' (678746 KB)...  
FAILED (remote: data length is too large)  
finished. total time: 3.146s
```

ere are the steps i took to manually flash: run the flash-all.bat up until the point where it fails

```
unzip Nexus9_flounder_jenkins_stable_11_2016-01-04_20-25.zip  
fastboot flash system system.img  
fastboot flash recovery recovery.img  
fastboot flash cache cache.img  
fastboot flash boot boot.img  
fastboot flash userdata vendor.img # - looks like userdata should be vendor? - mine worked with userdata rega  
from tablet - select hboot  
select factory reset
```

IMPORTANTE INSTALAR LA PLAY STORE, ESTA LA APK PARA BAJÁRSELA EN DESCARGAS <https://www.reddit.com/r/>

instalar gaps. lo anterior no me funciona
